Monica Johnson presented a case of a 42 yo woman with a complaint of difficulty swallowing solids.

The standard workup included a barium swallow, it identified an aberrant right subclavian artery that was causing a mass effect on the esophagus.

Dr. Brown presented the case of a 88 yo female with 3 months of chest pain in the upper chest, burning in quality, worse at night and better when sitting up, no fevers, no weight loss.

Dr. Brown presented the case of a 88 yo female with 3 months of chest pain in the upper chest, burning in quality, worse at night and better when sitting up, no fevers, no weight loss.

On August 2, 2017, Rebecca A. Fausel, MD, The Oregon Clinic Gastroenterology presented a case of a 48 yo male with a 2 month history of intermittent bloating, indigestion and belching. The patient had a 12 yo history of Crohn's disease.
